

Physician Compare Downloadable Database Dictionary

The Physician Compare downloadable file is organized at the individual professional level; each line is unique at the professional/enrollment/Group Practice/address level. Professionals with multiple enrollments and/or single enrollments linking to multiple practice location addresses are listed on multiple lines.

Category	Variable Code	Variable	Description	Length	Values
Provider Identification	NPI	NPI	Unique professional ID assigned by NPPES	10	digits

Million Hearts encourages physicians and other healthcare professionals to report—and excel in-- the Cardiovascular Prevention measures group in the PQRS program. High performance in these measures dramatically reduces the likelihood of a heart attack or stroke	1	Y/blank

Additional Information

Information in this downloadable file does not match the information as displayed on the Physician Compare website exactly, because:

- Website professional profiles represent all professional-level details while the downloadable file observations are at the professional-enrollment-address level. If a professional has more than one enrollment, more than one address per enrollment, or both, the individual professional will have multiple entries in the downloadable file.
 - This means that a single professional may have different specialties and different credentials from each enrollment.
- The downloadable database is focused on professionals and their practice locations. There is no group practice level reporting in the downloadable file as there is on the website.
 - You can manipulate this file to group professionals with affiliations to the same group to evaluate the data at the group practice level.
- Professional IDs (including the NPI, PECOS PAC ID and PECOS enrollment ID) and group practice or hospital IDs (including PECOS PAC ID and Medicare CCN) are included in the downloadable file to help distinguish professionals and group practices or hospitals with similar names. These IDs also help identify individual professionals who are affiliated with a group practice or hospital.
- The marker of line 2 suppression means that there were multiple possible addresses for that professional in the same building. This is a flag to help researchers who might want to send out surveys, marketers who want to send fliers, etc. know there is additional information like a suite number that they may want to search for.
- Only Medicare data (PECOS and claims) are used in the downloadable file. All licensed data are excluded from this dataset.
 - There is no Board Certification information
 - No residency data
 - No foreign language data
 - Hospital affiliation data are based only on Medicare claims-based linkages, so the affiliated hospitals for a particular professional listed on the website and on the downloadable file may not be the same.
