## SYMBOLS USED IN VITAL STATISTICS REPORTS

	Symbol
Class or item not applicable (3 dots)	...
Data not available (series of leaders)	----
Quantity is zero, in frequency tables (1 dash)	—
Quantity is zero, in rate or percent tables (1 cipher)	0
If rate or percent is more than 0 but less than 0.05	0.0
If both frequency and population base are zero in rate or percent tables (1 dash)	—
If the population is reported to be zero, but one or more births or deaths are reported, a footnote "Rate not computed" is used.	

# VITAL STATISTICS OF THE UNITED STATES

## PART II. GEOGRAPHIC CLASSIFICATION BY PLACE OF RESIDENCE

### INTRODUCTION

This volume—Vital Statistics of the United States, Part II—contains official natality and mortality statistics tabulated according to the place of residence of the mother of the child, or the place of residence of the decedent. Data compiled on a place-of-occurrence basis are published in a volume entitled "Vital Statistics of the United States, Part I." The tabulations published in both part I and part II are compiled from the same source material, being derived from transcripts of original birth and death certificates received from registration officials of States and cities, and of the outlying territory and possessions of the United States.

The tables given in this volume should be interpreted with some caution since several factors enter into the determination of the place of residence. The place of birth or death, in most cases, is clear-cut and definitely determinable. To determine the place of residence is more difficult because it is dependent upon definitions of residence as well as the completeness of the information given on the certificate. It has, therefore, been necessary to adopt a set of arbitrary rules for the proper coding in each instance. The data obtained by a reallocation of nonresidents are obviously dependent upon these rules and cannot be correctly interpreted unless the rules are exactly and clearly stated.

### THE VALUE OF VITAL STATISTICS TABULATED BY PLACE OF RESIDENCE

Tabulated vital statistics may be used for many purposes, each requiring data classified by different groupings or according to different definitions. Many of these uses relate to public health work, such as an evaluation of the problems confronting public health agencies or the measurement of the results of public health programs. Other uses relate to maternal- and infant-welfare activities, problems of population research, analysis of fertility trends, actuarial investigations, medical research, et cetera. For some purposes, such as a study of the hospital load carried by a given community, the proportion of births attended by physicians, or the simple ranking of causes of death, it is possible to use tabulated natality and mortality data without relating them to other statistical data. But for the most part, vital statistics take on their full value only when related to population figures by the computation of birth or death rates. For deaths, these rates, in their simplest form, consist of ratios of the number of deaths occurring in a specified place during a specified time to the number of persons exposed to the risk of death at that place and time. It is obvious that such a rate can be correctly computed and interpreted only when the population figure in the denominator and the mortality figure in the numerator are compiled on a comparable basis. In other words, the population figure must represent a certain group that is exposed to

the risk of death, and the death figure must include all of this group that died. Although the birth rate is interpreted in a different manner, similar considerations apply to it.

For the United States, as a unit, there is little difficulty in securing adequate comparability between vital statistics and population figures. However, for individual cities or counties or for population-size groups, there are several disturbing factors. In the population census, each person is counted as a part of the population of the geographic unit in which he has his "usual place of residence." Therefore, the enumerated population of a city is a count of all the persons who usually live in that city, excluding persons who are temporarily in the city at the time of the census and including residents of the city who are at some other place during the time of the population enumeration.

The crude death rate for the residents of any area must be based on the total resident population of that area and the total number of deaths occurring in this total resident population. It is essential to include the deaths of residents no matter where the deaths occurred, and to exclude deaths of nonresidents occurring in that area.

The occurrence of a large number of births and deaths "away from home" results from the movement of the people, facilitated by convenient methods of transportation, and from the increasing use of hospitals during confinement and illness. Seasonal movement to and from resort States, seasonal migration in search of employment, and the movement of people to some other area for hospital facilities not available in their usual place of residence, are several of the factors that contribute to the number of nonresident births and deaths.

Inasmuch as the registration laws of each State specify that births and deaths be registered at the place of birth or death, the compilation of vital statistics according to place of occurrence is the most direct and usual method. Rates computed on this basis may be called *recorded* rates, since all the births or deaths recorded in each area are included in the computation. The compilation of natality and mortality data on the same geographic basis as the population census requires a complete reallocation of births and deaths to the place of residence. When this reallocation has been made, it is then possible to compute *resident* rates. Since resident death rates are ratios of the number of deaths to the number of persons exposed to the risk of death, they indicate more accurately the force of mortality affecting a given population and can therefore be interpreted in terms of relative health conditions. Resident birth rates are interpreted somewhat differently, but similar considerations apply to them. Of course, in such interpretations, cognizance must be taken of other factors, such as the age, sex, and race distributions of the exposed populations.

From some points of view, it may seem incorrect to allocate deaths purely on a place-of-residence basis without taking into account the city or county responsible for the causes resulting in death. For example, a resident of one city may be killed in an automobile accident in another city. In such a case it may seem unreasonable to allocate that death to the city of residence if the accident was caused by traffic hazards of the city where the death occurred. However, even if desirable, the reallocations of deaths from most causes to the area responsible for the conditions resulting in death would be a highly speculative and difficult task. Furthermore, admitting the possibility of making such an assignment of deaths, it then becomes necessary to devise an "exposed-to-risk" figure quite different from an enumerated population.

Tabulations of vital statistics by place of occurrence are valuable and necessary for certain purposes. Tabulations by place of residence and the computation of resident birth and death rates provide data of greater value and meaning for many uses. However, resident data cannot be directly interpreted for every purpose. No single method of tabulation could be devised that would provide statistics compiled in the manner necessary for all possible problems.

### PREVIOUS TABULATIONS BY PLACE OF RESIDENCE <sup>1</sup>

The first nonresident tabulations made by the Bureau of the Census were published in the volume of "Mortality Statistics" for 1914. These tabulations included deaths, but not births, and consisted merely of a separation of nonresident deaths from the total deaths for each area. However, discovery of serious deficiencies in the place-of-residence information given on the death certificates resulted in the omission of nonresident tabulations from the published volumes from 1915 to 1917, inclusive. By 1918 it was believed that sufficient progress had been made with the basic data to resume publication of nonresident statistics.

In 1918 the nonresident mortality tabulations were revised so as to provide a complete allocation of deaths by place of residence within the limits of the then incomplete registration area. A decedent in the registration area whose place of residence was outside the registration area could not be reallocated to his place of residence. Similarly, deaths of residents of the registration area could not be included in the figures for this area if the deaths had occurred outside the registration area.

Tables showing the number of deaths by place of residence were published for each year from 1918 to 1930, inclusive. The rules for residence allocation remained essentially unchanged during this period. In 1931 the tabulation of nonresident deaths was discontinued as an economy measure, and for the years 1931 to 1934, inclusive, no data on this important subject are available.

The completion of the birth- and death-registration areas in 1933 made possible, for the first time, a nationwide reallocation of nonresidents to the place of residence. When the nonresident reallocation was resumed in 1935, the definition of a nonresident was revised and more detailed rules for allocation were formulated. In addition, compilation by place of residence was extended to birth statistics. Previous to 1935, no reallo-

cation of births to place of residence of the child's mother had been made by the Bureau of the Census.

Resident tabulations for 1935 and 1936 were made but were not published in the annual volumes—"Birth, Stillbirth, and Infant Mortality Statistics" or "Mortality Statistics." However, they were released in the series of "Vital Statistics—Special Reports."<sup>2</sup>

The publication in 1937 of a combined volume of natality and mortality data tabulated by place of residence marked an important change in the compilation of vital statistics by the Bureau of the Census. Since then, the tabulations by place of residence have been expanded considerably.

### NONRESIDENT TABULATIONS BY STATE OFFICES

Since vital statistics tabulations by place of residence are important in public health administration, many State departments of health compile natality and mortality data on this basis. A survey by the Bureau of the Census in 1935 revealed that 11 States were making rather complete resident reallocations and 8 States were publishing tables showing the number of deaths for cities and counties including and excluding deaths of nonresidents. A survey was made in 1938 by a Committee on Residence Allocation under the auspices of the Vital Statistics Section of the American Public Health Association. This survey indicated that 24 States were making regular tabulations involving the reallocation of nonresidents.

Answers to a questionnaire sent to all the States by the Bureau of the Census in 1941 indicated that 35 States and the District of Columbia were making some resident tabulations. In 4 States, these tabulations were limited to the separation of residents and nonresidents with no allocation to place of residence. In 13 States, the tabulations excluded nonresidents from other areas within the State and included residents who were born or who died elsewhere within the State; however, the tabulations in these States did not exclude nonresidents from other States or include residents of the State who were born or who died in another State. Nineteen States made complete place-of-residence tabulations excluding all nonresidents and including all residents within and outside the State.

In many States the resident tabulations are based solely on a reallocation of nonresidents within the State. In other words, these States do not include in their tabulations the deaths (or births) of residents of that State occurring in other States. For State totals, the allocation of interstate nonresidents is, in most cases, numerically unimportant. However, for areas near a State border, interstate reallocation may be very important since many deaths (or births) of residents of the area may occur in the adjacent State.

To assist the States in obtaining records of births or deaths of their residents in other States, the Vital Statistics Section of the American Public Health Association adopted, in 1931, a resolution requesting the Bureau of the Census to act as a clearing house in the exchange of such records. Since 1933, most States have sent to the Bureau of the Census copies of birth and death certificates for out-of-State nonresidents and these have been forwarded to the State of residence. Although this interstate exchange has been of considerable value to the individual States, it has not solved

<sup>1</sup> For a more detailed account of previous resident tabulations, see "Vital Statistics of the United States, 1937, Part II," p. 2, Bureau of the Census, Washington, D. C., 1939.

<sup>2</sup> For a list of these reports containing resident tabulations for 1935 and 1936, see "Vital Statistics of the United States, 1937, Part II," p. 2, Bureau of the Census, Washington, D. C., 1939.

all of the difficulties met by State agencies in making a complete reallocation.

Differences of opinion exist regarding the principles on which the definition of a nonresident and the rules used for coding should be based. For this reason the interstate transfer is not on a strictly uniform basis for all States. Some indication of the amount of variation among States can be seen in table A. In this table the number of nonresidents of each State, according to the Bureau of the Census definitions, is compared with those identified by the separate State offices. These comparisons are based upon transcripts which have been cleared through the Bureau of the Census. Since some interchange of nonresident transcripts is still made directly, these ratios do not completely represent the differences in State procedures. Table A shows for both births and deaths the number of nonresident transcripts to be subtracted from the

tabulations of each State, and the number of resident transcripts to be added. A study of the figures in this table, and particularly of the ratios between Federal and State figures, will indicate the existence of many differences in State procedures. While State tabulations fulfill an important need, it is obviously desirable for some central agency, operating with a uniform although arbitrary set of rules, to make Nation-wide tabulations.

One significant comment should be made regarding the differences between resident tabulations made by State agencies and those made by the Bureau of the Census. Because of the large number of transcripts involved in national tabulations, the coding rules used by the Bureau of the Census must be designed and simplified to facilitate mass production. Furthermore, the Bureau of the Census does not have access to the detailed local information necessary for certain

<sup>1</sup> Includes allocations outside of continental United States.

types of allocation. For these reasons, it is not practicable to introduce all possible coding refinements or to use different sets of rules for various causes of death. Many State offices, having special local problems or interests to meet, wish to use special coding rules for certain groups of data. For example, some States either allocate deaths in custodial institutions to the place of prior residence or consider these institutions as separate tabulation areas. Some States prefer to allocate deaths from infectious diseases to the area where the infection presumably originated; deaths from accidents, to the place of accident; deaths from homicide, to the place of homicide, et cetera.

The desirability of these special types of tabulation should be emphasized, but they often require detailed information available only in local offices and involve operating rules feasible only for a relatively small volume of work. Therefore, while it is desirable for a central agency to make national tabulations, these national uniform tabulations do not replace those made by the separate State agencies.

### DEFINITION OF RESIDENCE

The reallocation of births and deaths to place of residence is based on information somewhat different and collected in a manner different from that obtained in the enumerated population census. It is obviously not possible to use identical rules for both compilations. The tabulation of vital statistics on a place-of-residence basis requires that the information given on the certificate be interpreted in such a way as to result in classifications comparable with the population census figures. The necessity for such interpretation introduces arbitrary and controversial factors into the procedure of allocation. It can hardly be expected that the geographic classification by place of residence can be as direct and simple as the classification by place of occurrence.

In addition to difficulties in the definition of residence, there are several factors in the original collection of birth and death information that may produce errors or discrepancies in residence tabulations. The place of birth or death is usually obvious or easily learned by the person filling out the original certificate. On the other hand, the original informant or the State office may have to make an inquiry to determine the place of residence, particularly in the case of nonresident births or deaths. Since it is sometimes difficult to ascertain the precise geographic location of the place of residence, errors may be made occasionally. Because of these difficulties of residence designation and because of incomplete understanding of the importance of residence data, the residence information may be omitted or incompletely reported on birth and death certificates for certain areas.

In view of these considerations, errors in the residence tabulations for certain areas may be expected. It is believed that errors of a significant size are restricted to a small number of areas and will decrease as the meaning and importance of residence data become more widely understood.

**Relation of geographic code to the identification of nonresidents.**—Whether or not a person is classified as a nonresident depends somewhat upon the size of the area under consideration. A resident of Maine may die in California, yet this fact may be ignored when only totals for the United States are concerned. For

State totals, only those persons who cross State lines need be considered in a reallocation by place of residence, since any movement within the State is irrelevant. On the other hand, for the study of mortality conditions within a city (for individual census tracts or wards), it is necessary to use a much finer definition of a nonresident. In such cases it may be necessary, for example, to define as a nonresident a person who lived on one side of a street and died in a hospital on the other side of the same street.

In whatever way the place of residence may be defined, the size of the tabulation or coding unit will partially determine the number of identified nonresidents. If the coding unit—assuming the use of a punch-card system in which geographic areas are given numerical codes—is a whole county, obviously it is impossible to determine, from a tabulation of the cards, the number of persons who moved about within the county. If the coding unit is a single registration district, it will be possible to identify persons moving from one district to another within the county, but it will not be possible to measure the movement within districts.

The tabulations given in this volume are based on a geographic code that identifies each city or other urban place having a population of over 10,000 in 1940 and each county excluding these cities or urban places. The code for the county (exclusive of the cities or urban places of 10,000 or more) is subdivided into two codes, one for all urban places of 2,500 to 10,000 as a group, and another for all villages under 2,500 and rural areas as a group. In coding the place of residence, movement from an urban place or city of 2,500 or more to another place or city of 2,500 or more, in the same or a different county, is identified. Similarly, any population movement from one county to another is identified, including movement to or from rural areas in different counties. However, movement from a village under 2,500 or from a rural area to another village under 2,500 or rural area within the same county is not identified.

Another limitation should be mentioned. If, for example, the nonresident deaths for each urban place and county within a State are tabulated, it is not possible to add these figures together and obtain the number of nonresidents of the whole State. Such addition will give the number of persons in the State who died in a tabulation-unit area other than the area of their residence, but it will not give the number of nonresidents of the State since a nonresident in an urban place may be a resident of some rural area or some other urban place in the same State. Therefore, the term "nonresident" may have one or two meanings. In reference to the smallest unit of tabulation (in this report an urban place or county), a nonresident is a person who died within that unit but whose usual place of residence was in some other unit. In reference to a consolidation of separate geographic units (for example, a whole State), the term refers to the number of persons dying therein who are nonresidents of the particular place of death but are not necessarily nonresidents of the consolidated area. Furthermore, since the nonresidents of one area are necessarily residents of some other area, it is necessary to apply both terms to the same data when considered in different aspects. In order to avoid confusion, the tables given in this volume include headnotes or footnotes when additional explanation seems necessary.

**Allocation of deaths to place of residence.**—The allocation of deaths to the place of residence is based on the following general principles and rules.

1. Mortality data should be compiled so as to correspond with enumerated populations on which rates are to be based. Each death should be assigned to the area which was the "usual place of residence" of the decedent.

2. A decedent is defined as a nonresident if the place of residence stated on the certificate is different from the place of death. However, decedents who at the time of death had been living more than 1 year in a community are considered residents of that community even though some other place of residence is stated.

3. Decedents in nonresident institutions such as general hospitals, tuberculosis sanatoriums, convalescent homes, jails, et cetera, are reallocated to the usual place of residence.

4. Decedents in resident institutions, where length of stay is usually long, such as mental institutions; orphanages; homes for the aged, blind, and deaf; et cetera, are not reallocated to the place of prior residence.

5. Decedents whose usual place of residence is a foreign country or a United States possession outside the United States are not reallocated to the usual place of residence.

6. Infants born at other than the place of residence of the mother, who die before returning to the mother's residence are reallocated to the place of residence of the mother.

For the purpose of coding mortality transcripts, these rules have been expanded into definite coding instructions which state the procedure followed in each case. These instructions have been published in the Instruction Manual of the Vital Statistics Division.<sup>3</sup>

**Special residence instructions for military personnel.**—On all death certificates having indications that the deceased was a member of the Army, Navy, or Marine Corps, the usual place of residence is the post or port at which the deceased was stationed.

In cases where the death occurred while the person was in the process of being transferred from one post to another, the person is to be considered a resident of the post from which he was being transferred.

In cases where the death occurred while on land maneuver or leave, the usual place of residence is the post at which the deceased was stationed.

If the death occurred aboard a naval vessel at sea, the place of death will be the vessel and the death certificate should have been filed at the first port of call. If a permanent station is not indicated, the place of residence of the deceased is assumed to be the place of residence of the nearest relative to the deceased.

**Allocation of births to place of residence.**—The allocation of births is made according to the same general principles as the allocation of deaths. In the case of births, however, the residence of the mother is considered to be the place of residence of the child.

For the purpose of coding natality transcripts, these rules have been expanded into definite coding instructions which state the procedure followed in each case. These instructions have been published in the Instruction Manual of the Vital Statistics Division.<sup>3</sup>

the differences are not large, for certain States the difference between the residence and recorded rates is sufficiently large to warrant the use of rates by place of residence in State-to-State comparisons of natality and mortality rates relating to residents of the respective States. For individual counties and cities, the differences between the residence and recorded rates may be very large. Careful consideration, therefore, should be given to the desired basis of comparison in selecting data for studying intercounty and intercity differences in natality and mortality.

**Comparison of resident and recorded rates by States.**—The recorded crude birth rates in 1944 for 5 States did not differ from the corresponding rates by place of residence; for 26 States the difference was less than 2 percent; for 9 States the recorded rates were from 2.5 to 9.8 percent higher than the corresponding resident rates; and for 8 States the recorded crude birth rates were from 2.1 to 7.3 percent lower than the rates on a residence basis. The State for which the recorded birth rate was in excess by 9.8 percent in 1944 was Arizona, and the State for which the recorded rate showed the greatest deficit of 7.3 percent was Maryland. In the District of Columbia, the recorded birth rate was 31.4 percent higher than the resident birth rate in 1944.

The recorded crude death rates in 1944 for 16 States were the same as the corresponding rates on a residence basis; for 24 States the difference was less than 2 percent; for 5 States the crude death rates by place of occurrence were higher than the corresponding resident rates by 2.8 to 8.5 percent; and for 3 States the recorded crude death rates were lower than the resident rates by 2.0 to 3.4 percent. In the District of Columbia, the recorded death rate exceeded the resident death rate by 6.4 percent.

### DEATHS ALLOCATED TO PLACE OF RESIDENCE

**Summary.**—A total of 1,411,338 deaths were registered in the continental United States in 1944. Of this total, 243,678, or 17.3 percent, were nonresidents of the city or county in which death occurred. Most of the nonresidents tabulated for any State are residents of some other part of the same State and do not, therefore, represent population movement between States. Of the 243,678 nonresident deaths in 1944, 37,075 were interstate nonresident deaths. These comprised 15.2 percent of all nonresident deaths and only 2.6 percent of all deaths.

A summary of the reallocation of deaths in 1944 to place of residence is given in table D. This table shows the total number of deaths that occurred in each State, the number of these that were of nonresidents, the number of deaths of residents that occurred in other areas (exclusive of deaths among the armed forces overseas), and the total number of deaths of residents. For example, 24,449 deaths were recorded in Florida in 1944. Of this total number of recorded deaths, 5,775 occurred in a city or county of which the decedent was not a resident. In 4,045 instances the decedent was a resident of some other area of Florida, and in 1,730 instances the decedent was a resident of some other State. The table also shows that of the 23,500 residents of Florida that died in 1944, 4,045 deaths occurred in some area of Florida other than their city or county of residence, and 781 deaths of residents occurred in some other State.

An inspection of table D indicates a relatively small difference between the total number of deaths occurring in a State and the total number of deaths of residents of the State. In general, interstate nonresident deaths are a small proportion of the total deaths and, in most cases, the number of residents leaving a State and dying in other States approximately balances the number of residents of other States dying within the State. Except in States where a large number of out-of-State nonresidents are to be expected, reallocation does not greatly change the State totals. The greatest difference

between the number of recorded and resident deaths was reported in 1944 for Arizona where the recorded total exceeded the number of resident deaths by 8.9 percent. For Florida the number of deaths by place of occurrence was 4.0 percent greater than the corresponding figure by place of residence, and for California the difference was only 0.7 percent. These figures are probably affected to some extent by the practice during the war years of including deaths among members of the armed forces stationed in the area in the residence totals of States in which the camp or station is located. However, the effect of this practice cannot be evaluated.

Generally speaking, it is not necessary to reallocate deaths to the place of residence in order to obtain fairly comparable State totals. In the case of individual areas within the State, however, reallocation is very important because of the relatively large intrastate movement of population. To obtain correct figures for areas near State borders, it is probably necessary that the reallocation be on an interstate as well as on an intrastate basis.

**Number of nonresident deaths.**—The proportion of nonresident deaths to all deaths in 1944 is given for each State in table E. This table shows the total number of deaths occurring in each State and the number and percent of these that were deaths of nonresidents of the particular area in which death occurred. For the entire United States the nonresident deaths constituted 17.3 percent of all deaths, but in individual States this proportion ranged from 10.4 percent in New York to 30.5 percent in North Dakota.

**Effect of residence reallocation on urban and rural death statistics.**—The reallocation of deaths to the place of residence of the decedent affects mortality data for urban places of various population sizes. Table F shows, for places classified according to population size, the total number of deaths of residents in 1944, wherever occurring, except among the armed forces overseas, and the total number of deaths occurring in each area. From these data it is apparent that the number of recorded deaths for urban places is considerably higher than the number of resident deaths. The converse is true of deaths for rural areas. These comparisons again illustrate the effect of the movement of people on mortality statistics.

TABLE F.—RESIDENT AND RECORDED DEATHS AND PERCENT DIFFERENCE, URBAN AND RURAL: UNITED STATES, 1944

[Exclusive of stillbirths]

The number of resident and recorded deaths in 1944 and the percent differences between these figures are shown in table G for 92 individual cities having populations of 100,000 or more in 1940. In all except 8 of these large cities, the number of recorded deaths was higher than the number of resident deaths. Most of the 8 cities are located near other urban places with large hospital facilities or have a portion of their hospital facilities located in the surrounding suburbs.

## INFANT MORTALITY STATISTICS

### Infant mortality rates for urban and rural areas.—

Table H shows the urban and rural infant mortality rates by race for the continental United States on a place-of-residence basis. The rates for all races in 1944 ranged from 36.0 deaths under 1 year per 1,000 live births for cities of 100,000 or more to 44.6 for urban places of 2,500 to 10,000. The differences in rates between areas are greater for nonwhite than for white infants. In comparison with the corresponding figures for 1943, the rates for rural areas, all races, showed a decrease of 1.7 percent, while for urban areas the 1944 rates were 1.3 percent lower than the 1943 rates. In interpreting these comparative figures, it should be noted that they are based on rates not adjusted for annual changes in the number of births. Therefore, they indicate the year-to-year difference in the infant mortality experience less accurately than if the rates were adjusted for changes in the number of births. Adjusted infant mortality rates are discussed in the introduction to part I of this volume.

TABLE H.—INFANT MORTALITY BY RACE, URBAN AND RURAL: UNITED STATES, 1944

[By place of residence. Exclusive of stillbirths. Rate per 1,000 births in each specified group]

AREA	DEATHS UNDER 1 YEAR					
	Total		White		Nonwhite	
	Number	Rate	Number	Rate	Number	Rate
United States.....	111,127	39.8	90,607	36.9	20,520	60.3
Urban.....	63,482	39.1	53,316	36.5	10,166	63.0

Places of 25,000 to 100,000.....	13,609	40.1	11,562	37.4	2,047	68.1
Places of 10,000 to 25,000.....	9,509	40.8	8,197	38.3	1,312	69.7
Places of 2,500 to 10,000.....	12,891	44.6	11,257	42.2	1,634	73.1
Rural.....	47,645	40.7	37,291	37.6	10,354	57.9

Infant mortality rates by States.—A comparison of the infant mortality rates for the various States and geographic divisions is given in table J. The lowest rate, for all races, 30.5 per 1,000 live births, was reported for Oregon; and the highest rate, 89.1, for New Mexico. Although the rates for the individual States within the specific geographic divisions varied considerably, they tended to be highest in the Mountain and South Atlantic States and lowest in the Pacific and West North

Central States. The comparability of infant mortality rates between States is affected by incomplete birth and death registration in some States. However, the indicated differences in infant mortality are much too large to be explained solely on this basis.

TABLE J.—INFANT MORTALITY RATES BY RACE: UNITED STATES, EACH DIVISION AND STATE, 1944

## DEATHS IN HOSPITALS AND INSTITUTIONS

Of the 1,411,338 deaths registered in the continental United States in 1944, 640,120 were reported as having occurred in hospitals and institutions. The reported number of deaths in hospitals and institutions in 1944 was 0.5 percent lower than the 643,061 reported in 1943. Although the number of deaths in hospitals and institutions decreased slightly, the proportion of such deaths to total deaths has continued to increase. In 1940, the deaths in hospitals and institutions represented 39.0 percent of total deaths, in comparison with 40.8 percent in 1941, 42.3 percent in 1942, 44.1 percent in 1943, and 45.4 percent in 1944.

Table K shows for each State the proportion of resident deaths in institutions. The proportion ranged from 24.5 percent for residents of Mississippi to 59.2 percent for Washington residents. The proportion of deaths in institutions was 60.0 percent for the District of Columbia. In general, the proportion was low for residents of Southern States, and relatively high for those of Mountain, Pacific, and New England States.

The "institutional" grouping in table K is based on the institution code. Under this code, all types of hospitals, sanatoriums, nursing homes, and convalescent homes, and also resident institutions, such as homes for

the aged and penal establishments, are included within the broad term "institution." For the most part, deaths classified as occurring in institutions take place in general hospitals. Table L shows, for 1944, the number of deaths in the continental United States and the proportion of these deaths occurring in each broad class of institution. Of the total number of deaths, 54.6 percent did not occur in an institution, 35.8 occurred in general hospitals, and 9.6 percent occurred in other types of hospitals and institutions.

## BIRTHS ALLOCATED TO PLACE OF RESIDENCE

**Summary.**—Of the 2,794,800 live births registered in the United States in 1944, 1,923,015 occurred in the city or county in which the mother of the child usually resided; and 871,785, or 31.2 percent, were nonresident births as compared with 838,609, or 28.6 percent, in 1943. A large proportion of the nonresident births are to mothers who lived in rural areas or small cities and gave birth in more populous areas. Only a small per-

centage of the mothers who give birth elsewhere than in their usual place of residence cross State lines. In 1940 only 6.3 percent of all nonresident births were to mothers from States other than the one in which the birth occurred. With the increased interstate population movement of the war period, however, the proportion increased slightly from year to year and was 8.4 percent in 1944.

A summary of births in 1944, by place of occurrence and by place of residence is given by States in table M. This table shows, for each State, the number of births registered as occurring within the State; the total number of nonresident births within the State, that is, the number of births occurring in cities or counties of which the mother was not a resident; the number of these occurring to nonresident mothers who lived in some other part of the same State; and the number to mothers living in other States. This table also shows the number of births to residents of each State occurring in other areas, and the total number of births to residents wherever occurring.

Number of nonresident births.—Although for the entire continental United States the nonresident births in 1944 were 31.2 percent of all births, this proportion varied widely among States. It ranged from 15.1 percent in Kentucky to 50.8 percent in New Jersey. Table N gives the total number of births occurring in each State and the number and percent that occurred in a city or county of which the mother was not a resident. The frequency distribution of these percentages by States is given in table O. In 2 States less than 19 percent of the births were to nonresidents, while in 11 States 40 percent or more of the births were to nonresidents.

Effect of residence reallocation on urban and rural birth statistics.—Table P shows the difference between the number of births to residents of urban and rural areas and the number of births occurring in the corresponding areas. The place-of-occurrence figures are much higher than those by place of residence in the urban areas, whereas the contrary is true of the rural areas. In comparing the birth figures for urban and rural areas, differences in completeness of birth registration should be taken into account.<sup>4</sup>

<sup>4</sup> See Vital Statistics—Special Reports, vol. 17, No. 18, Bureau of the Census, Washington, D. C., 1943.

TABLE P.—RESIDENT AND RECORDED BIRTHS AND PERCENT DIFFERENCE, URBAN AND RURAL: UNITED STATES, 1944

Rural.....	1,171,236	731,519	-439,717	-37.5

The number of births in 1944, by place of residence and by place of occurrence, is given in table Q for each of the 92 cities having, in 1940, a population of 100,000 or more. The place-of-residence figures are lower than those by place of occurrence for every city except Chicago, Indianapolis, Los Angeles, Miami, New Bedford, Reading, and Somerville. Since many factors contribute to the number of nonresident births occurring in a community, a careful study of local conditions is necessary to explain the varying differences observed between residence and occurrence statistics. Among the important factors are: the number and location of hospitals in suburbs surrounding a given city, the density of population in adjacent rural areas and the distance to other cities, and the extent to which hospital facilities are available within the given city.

## BIRTHS IN HOSPITALS

The use of hospitals for confinements by the inhabitants of any area is more correctly indicated by data reallocated to place of residence than by data based on place of birth. This information for States, by urban and rural areas, is given for 1944 in table R, which shows the proportion of resident births of each area occurring in hospitals.

In the entire United States, 2,112,963 or 75.6 percent of all live births occurred in hospitals. Of the 1,623,564 births to urban residents, 1,447,008 or 89.1 percent occurred in hospitals. Live births to rural residents numbered 1,171,236 and of these 665,955 or 56.9 percent occurred in hospitals.

By States, the proportion of resident births occurring in hospitals ranged from 31.2 percent for Mississippi to 97.9 for Connecticut. For residents of rural areas, the proportion varied from 21.4 percent for Mississippi to 97.2 for Connecticut. For urban residents, the proportion ranged from 65.4 percent for Alabama to 98.9 for Washington.

Considerable variation in the urban-rural differential is also apparent in the data for each State. For example, only 21.4 percent of the births among rural residents of Mississippi occurred in hospitals, whereas 66 percent of births to urban residents were in hos-

pitals. For residents of Connecticut, on the other hand, the percentage of births among rural and urban residents occurring in hospitals was 97.2 and 98.2 percent, respectively.

Table S gives a frequency distribution of the States for the past 5 years according to the proportion of resident births occurring in hospitals. That there has been a constant increase in the number of States having a larger proportion of resident births occurring in hospitals is readily evident. Whereas in 1940 there were 10 States in which less than 30 percent of resident births occurred in hospitals, in 1944 there were no States in this category; and while there was only 1 State in 1940 in which 90 percent or more of the resident births occurred in hospitals, in 1944 there were 16 such States.

The hospital coding and classification for birth statistics is not based on the institution code used for mortality. The births are coded with a simple code that indicates only whether or not the birth took place in a hospital or other institution. However, almost all births in institutions actually occur in general or maternity hospitals.

Detailed statistics of births by type of attendance are given in table 11. The total number of births by place of residence is shown for each urban place and county of each State. Four types of attendants are distinguished in these tabulations, namely, physician not in a hospital, physician in a hospital, midwife, and other or unspecified attendant.

TABLE S.—FREQUENCY DISTRIBUTION OF STATES BY PERCENT OF RESIDENT BIRTHS IN HOSPITALS: UNITED STATES, 1940-1944

## ILLEGITIMATE BIRTHS

The number of reported illegitimate live births and the ratio per 1,000 live births for each year since 1917 are given in table T. In 1944, there were 87,001 births in the continental United States (exclusive of California, Colorado, Connecticut, Maryland, Massachusetts, Nebraska, New Hampshire, New Mexico, New York, and Wyoming) reported as illegitimate, and the ratio was 40.4 per 1,000 live births, as compared with 36.5 in 1943.

Data relating to illegitimacy were first made available in 1917. For that year the ratio was 20.2, but from that point the ratio rose fairly steadily to the highest point, 41.9 in 1939. The tendency then was downward and the ratio for 1943 was 12.9 percent lower than the ratio for 1939. However, a rise in 1944 brought the ratio to a point only 3.6 percent lower than the 1939 peak.

The trend in the ratio for all races prior to the completion of the birth-registration area in 1933 was somewhat influenced by the addition of States to the area and the changing racial composition of the popu-

lation in the area. The ratio for nonwhite races has always been very high in comparison with that for the white race. Therefore, the addition to the registration area of States with a high proportion of Negroes accelerated the upward trend of the ratio for all races. Nevertheless, the proportion of recorded illegitimate births for the white group, alone, increased markedly and fairly regularly to 1933.

TABLE T.—ILLEGITIMATE BIRTHS BY RACE: BIRTH-REGISTRATION AREA, UNITED STATES, 1917-1944

[By place of residence for 1939-44; by place of occurrence for 1917-38. Exclusive of stillbirths. Ratio per 1,000 births]

YEAR	ILLEGITIMATE BIRTHS <sup>1</sup>

1922	35,605	18,471	17,134	25.8	14.8	130.0
1921	34,824	17,440	17,384	26.6	14.8	128.5
1920	27,749	15,170	12,579	24.9	15.0	125.0
1919	23,660	12,360	11,300	23.6	13.6	121.9
1918	19,906	12,000	7,906	19.4	12.5	113.8
1917	20,464	12,238	8,226	20.2	13.0	120.1

<sup>1</sup> The following States do not require a statement of legitimacy of child: California, Massachusetts, and New York for each year; Texas for 1938 and 1939; Maryland, Nebraska, New Hampshire, and Wyoming for 1940-1944; Colorado, Connecticut, and New Mexico for 1943 and 1944.

NOTE.—Data not available for the years 1915 and 1916.

The lowest ratio for the white race, 12.5, was recorded in 1918 and the highest, 21.4, in 1935. From 1936 through 1939, the ratio for the white race varied only from 20.1 to 20.5, but from 1939 to 1943 the tendency was consistently downward. The ratio of 19.6 for illegitimate white infants in 1944 was the highest since 1939.

Data on illegitimate live births reported in 1942, 1943, and 1944 are given for individual States in table U. The table shows the number of illegitimate births, reallocated to the State of the mother's usual residence, for all races and for the white and nonwhite groups separately; also the number of illegitimate births per 1,000 total live births. California, Maryland, Massachusetts, Nebraska, New Hampshire, New York, and Wyoming were entirely excluded from the tabulation because these States did not require a statement concerning legitimacy in any of the 3 years. Three others, Colorado, Connecticut, and New Mexico, which are listed in the table did not require the statement in 1943 or 1944. It must be recognized also that the reporting of the fact of illegitimacy in the States included in the tabulation probably is incomplete and inaccurate.

TABLE U.—ILLEGITIMATE BIRTHS BY RACE: UNITED STATES<sup>1</sup> AND EACH STATE, 1942-1944

[By place of residence. Exclusive of stillbirths. Ratio per 1,000 births]

<sup>1</sup> The following States do not require a statement of legitimacy of child: California, Colorado, Connecticut, Maryland, Massachusetts, Nebraska, New Hampshire, New Mexico, New York, and Wyoming.

<sup>2</sup> This State legislated during 1943 to omit statement of legitimacy of child. Figures in parentheses are not included in total to maintain a comparable area.

## STILLBIRTH STATISTICS

**Reporting of stillbirths.**—Information on stillbirths was first collected by the Bureau of the Census in 1918. No data were collected or published for the years 1919 to 1921, inclusive, but since 1922 stillbirth tables have been compiled annually for the birth-registration area.

In some States stillbirths are reported on a special stillbirth certificate, whereas in others, State laws require the physician or attendant at a stillbirth to file both a birth and a death certificate. Such basic differences in reporting procedure introduce some variation in the completeness of registration and in the information reported. More important, from a statistical standpoint, are differences in the legal definitions of a stillbirth used in the States. Variations in the definition make it difficult to compile strictly comparable data for all States, and confuse the interpretation of consolidated national figures. A list showing the various definitions used in reporting stillbirths has been published each year previous to 1937 in the volume entitled "Birth, Stillbirth, and Infant Mortality Statistics." More recent data on stillbirth definitions for the States are given in Vital Statistics—Special Reports, volume 3, number 2, table 13. Neither of these sources of definitions can be considered up to date since changes may occasionally be made in State procedures.

Detailed tables classifying stillbirths by area, race, age of mother, nativity of mother, and other subjects, are given in tables 12 through 16 in the section containing general natality and mortality tables.

The total number of stillbirths and the ratio of stillbirths to 1,000 live births are given in table W for the birth-registration area for a series of years. The ratio of stillbirths to live births for 1918, the first year for which these data are available, was 40.1. For the years 1922 to 1930, inclusive, the ratio varied around 38, 39, and 40, without demonstrating any appreciable trend. From 1930 to 1943 the ratio decreased consistently with a very slight increase of 1.1 percent occurring for the first time in 1944. As the registration area has included the entire United States since 1933, the decrease in the stillbirth ratio since that time is clearly due to factors other than changes in the area.

TABLE W.—RATIO OF STILLBIRTHS TO LIVE BIRTHS: BIRTH-REGISTRATION AREA, UNITED STATES, 1918-1944

[Ratio per 1,000 live births]

YEAR	Live births	STILLBIRTHS	
		Number	Ratio
1944.....	2,794,800	75,495	27.0
1943.....	2,934,860	78,485	26.7
1942.....	2,808,996	79,174	28.2
1941.....	2,513,427	75,133	29.9
1940.....	2,360,399	73,802	31.3
1939.....	2,265,588	72,598	32.0
1938.....	2,286,962	73,467	32.1
1937.....	2,203,337	73,609	33.4
1936.....	2,144,790	73,735	34.4
1935.....	2,155,105	77,119	35.8
1934.....	2,167,636	78,503	36.2
1933.....	2,081,232	77,059	37.0
1932.....	2,074,042	78,351	37.8
1931.....	2,112,760	80,616	38.2
1930.....	2,203,958	86,466	39.2
1929.....	2,169,920	85,678	39.5
1928.....	2,233,149	89,765	40.2
1927.....	2,137,836	82,931	38.8
1926.....	1,856,068	70,716	38.1
1925.....	1,878,880	71,519	38.1
1924.....	1,930,614	75,817	39.3
1923.....	1,792,646	69,757	38.9
1922.....	1,774,911	70,010	39.4
1918.....	1,211,685	48,634	40.1

<sup>1</sup> Exclusive of Massachusetts, Rhode Island, Washington, and Baltimore, Md. No transcripts of stillbirths were received from these areas.

NOTE.—Data relating to stillbirths were not collected for the years 1919 to 1921, inclusive.

## VITAL STATISTICS OF THE UNITED STATES

TABLE 2.—BIRTHS, DEATHS, DEATHS UNDER 1 YEAR, AND STILLBIRTHS, AND INFANT MORTALITY RATES, URBAN AND RURAL: UNITED STATES, EACH STATE AND COUNTY, AND EACH URBAN PLACE OF 10,000 OR MORE, 1944

(By place of residence. Births, deaths, and deaths under 1 year, exclusive of stillbirths. Infant mortality rates per 1,000 live births in a specified race group. White and nonwhite are shown separately for those counties and urban places in which the 1940 populations for nonwhite races formed 10 percent or more of the total, or numbered 10,000 or more.)

Note.—Certain cities listed in this table are located in more than one county. In these cases, figures for the county include only the figures for that part of the city in the county. Total figures for each of these cities are shown under the county containing the larger proportion of the city's population. Totals for Amarillo, Tex., are shown under Potter County; Atlanta, Ga., under Fulton County; Bethlehem, Pa., under Northampton County; Centralia, Ill., under Marion County; Elgin, Ill., under Kane County; Ellwood City, Pa., under Lawrence County; Fostoria, Ohio, under Seneca County; Huntington, W. Va., under Cabell County; Joplin, Mo., under Jasper County; Rocky Mount, N. C., under Nash County; St. Cloud, Minn., under Stearns County; Watertown, Wis., under Jefferson County; and Youngstown, Ohio, under Mahoning County. Likewise, total figures for Yellowstone National Park are shown under Wyoming.

## GENERAL TABLES—LIVE BIRTHS

89

TABLE 5.—LIVE BIRTHS BY RACE, BIRTH ORDER (EXCLUDING STILLBIRTHS), AND AGE OF MOTHER:  
UNITED STATES AND EACH STATE, 1944

(By place of residence. Birth order refers to number of children ever born alive to mother. Figures for Massachusetts are included in the "total" and "not stated" classifications; they are not given by birth order because this State does not require the reporting of such information.)

AREA, RACE, AND BIRTH ORDER (EXCLUDING STILLBIRTHS)	Total births	AGE OF MOTHER										
		10 to 14 years	15 to 19 years	20 to 24 years	25 to 29 years	30 to 34 years	35 to 39 years	40 to 44 years	45 to 49 years	50 to 54 years	55 years and over	Not stated

## VITAL STATISTICS OF THE UNITED STATES

TABLE 7.—LIVE BIRTHS BY BIRTH ORDER (EXCLUDING STILLBIRTHS), RACE, AND NATIVITY OF WHITE MOTHER:  
UNITED STATES AND EACH STATE, 1944

(By place of residence. Birth order refers to number of children ever born alive to mother. Figures for Massachusetts are included in the "total" and "not-stated" classifications; they are not given by birth order because this State does not require reporting of such information)

Note.—Certain cities listed in this table are located in more than one county. In these cases, figures for the county include only the figures for that part of the city in the county. Total figures for each of these cities are shown under the county containing the larger proportion of the city's population. Totals for Amarillo, Tex., are shown under Potter County; Atlanta, Ga., under Fulton County; Bethlehem, Pa., under Northampton County; Centralia, Ill., under Marion County; Elgin, Ill., under Kane County; Ellwood City, Pa., under Lawrence County; Fostoria, Ohio, under Seneca County; Huntington, W. Va., under Cabell County; Joplin, Mo., under Jasper County; Rocky Mount, N.C., under Nash County; St. Cloud, Minn., under Stearns County; Watertown, Wis., under Jefferson County; and Youngstown, Ohio, under Mahoning County. Likewise, total figures for Yellowstone National Park are shown under Wyoming.

## GENERAL TABLES—DEATHS FROM SELECTED CAUSES

185

TABLE 20.—DEATHS FROM SELECTED CAUSES, BY MONTH: UNITED STATES AND EACH STATE, 1944—Continued

(By place of residence. Exclusive of stillbirths and of deaths among armed forces overseas. Numbers after causes of death are those of the detailed International List of Causes of Death, 1938 revision)

AREA AND CAUSE OF DEATH	Total deaths	Jan.	Feb.	Mar.	Apr.	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.
<b>INDIANA—Continued</b>													
Pneumonia (all forms) and influenza..... 107-109,33	2,227	556	272	279	225	129	72	69	68	81	136	152	188
Bronchopneumonia..... 107	668	109	82	90	84	38	26	24	23	33	51	55	73
Lobar pneumonia..... 108	648	121	74	83	58	61	25	25	28	20	42	54	57
Pneumonia (unspecified)..... 109	276	54	34	31	31	11	11	16	8	12	19	26	23
Influenza..... 33	615	272	82	75	52	19	10	4	9	16	24	17	35
Ulcer of stomach or duodenum..... 117	188	18	14	25	10	19	15	13	19	19	14	10	14
Diarrhea, enteritis, etc.*..... 119,120	288	17	15	19	11	20	25	28	39	39	28	28	21
Appendicitis..... 121	221	21	14	21	26	20	15	21	19	17	23	13	11
Hernia and intestinal obstruction..... 122	349	26	25	28	32	43	26	26	24	30	26	35	28
Cirrhosis of the liver..... 124	231	20	22	17	19	18	21	15	19	22	14	25	21
Biliary calculi, etc.*..... 126,127	183	8	17	17	11	15	18	18	18	15	15	13	18
Nephritis..... 130-132	3,285	322	279	304	264	267	261	252	236	244	263	231	310
Diseases of the prostate..... 137	170	18	20	12	20	16	10	7	18	12	13	12	12
Diseases of pregnancy, etc.*..... 140-150	141	15	8	7	15	15	14	15	19	7	5	9	12
Puerperal septicemia..... 140,142a,145a,147	56	9	3	5	7	6	8	4	3	1	3	6	1
Puerperal toxemia..... 141a,c,144,148	31	3	3	-	-	6	3	3	5	2	2	1	3
Hemorrhage, trauma and shock*..... 141b,142b,143,146,149	47	2	1	1	7	2	3	7	10	4	-	2	8
Other puerperal causes..... 141d,e,f,145b,150	7	1	1	1	1	1	-	1	1	-	-	-	-
Congenital malformations..... 157	433	34	38	38	22	35	39	27	47	45	41	36	34
Premature birth..... 158	722	59	47	72	61	54	61	58	60	55	70	63	69
Suicide..... 163,164	431	31	32	42	40	38	40	43	43	34	32	33	23
Homicide..... 165-168	96	8	7	6	5	9	8	5	11	11	6	11	9
Accidental deaths..... 169-195	2,755	282	207	193	200	257	235	252	212	226	180	258	258
Motor-vehicle accidents..... 170	774	77	61	46	59	67	57	54	69	59	81	64	80
Other accidents..... 169,171-195	1,979	205	146	147	141	184	200	181	183	155	145	116	178
Senility, ill-defined and unknown causes..... 162,199,200	439	39	39	31	26	30	26	48	41	39	41	36	40
All other causes.....	3,939	354	329	341	338	316	345	341	289	279	314	326	367
<b>IOWA..... All causes</b>	<b>26,084</b>	<b>2,973</b>	<b>2,128</b>	<b>2,376</b>	<b>2,308</b>	<b>2,242</b>	<b>1,996</b>	<b>1,921</b>	<b>1,904</b>	<b>1,844</b>	<b>2,050</b>	<b>2,066</b>	<b>2,278</b>
Typhoid and paratyphoid fever..... 1,2	4	-	-	-	-	-	-	-	1	3	-	-	-
Cerebrospinal (meningococcus) meningitis..... 6	21	3	1	5	4	2	-	-	-	-	1	4	1
Scarlet fever..... 8	16	4	1	3	1	4	3	-	-	-	-	-	-
Whooping cough..... 9	26	3	4	-	1	4	3	3	-	1	1	3	3

\*Includes data for Texarkana, Ark., only.

\*Since this area is difficult to identify from the information given on the death transcripts, data may be understated or overstated.

\*Figures for District 1511, Center Hill (Fulton Co.), are included in those for Atlanta.

\*Comprising Bronx, Brooklyn, Manhattan, Queens, and Richmond Boroughs, treated as a unit.

\*Includes data for Bristol, Tenn., only.

\*Includes data for Texarkana, Tex., only.

\*Classified as urban under a special rule in the 1940 census.

\*Includes data for Bluefield, W. Va., only.

## GENERAL TABLES—DEATHS FROM SELECTED CAUSES

481

IN 1940, POPULATIONS OF 10,000 OR MORE, 1944—Continued

on p. 454)

Acute rheumatic fever	Diabetes mellitus	Pellagra (except alco- holic)	Intracranial lesions of vascular origin	Diseases of the heart	Pneumonia (all forms) and influenza	Diarrhea, enteritis, and ulceration of in- testines	Nephri- tis	Diseases of preg- nancy, childbirth, and the puerperium	Congenital malforma- tions and diseases peculiar to the first year	Suicide	Homi- cide	Motor- vehicle accidents	Other acci- dents	Senility, ill-defined and unknown causes	All other causes

## VITAL STATISTICS OF THE UNITED STATES

TABLE 24.—DEATHS FROM EACH CAUSE, BY RACE AND SEX:

(By place of residence. Exclusive of stillbirths)

Int. List No.	CAUSE OF DEATH	MISSOURI				MONTANA							
		Total deaths	White		Nonwhite		Total deaths	White		Nonwhite			
			M	F	M	F		M	F	M	F		
VIII.—Diseases of the respiratory system—Continued													
106b	Chronic bronchitis.....	72	36	34	2	-	4	1	2	-	1	-	-
106c	Bronchitis (unspecified).....	14	6	6	-	2	3	1	1	1	1	-	-
107	Bronchopneumonia (including capillary bronchitis).....	1,098	471	442	91	94	107	55	34	6	12	-	-
108	Lobar pneumonia.....	1,191	603	441	90	57	85	54	26	2	3	-	-
109	Pneumonia (unspecified).....	98	50	40	4	4	58	26	15	10	7	-	-
	A. Atypical or virus pneumonia.....	11	4	6	1	-	7	4	2	1	-	-	-
	B. Pneumonia (all other, unspecified).....	87	46	34	3	4	51	22	13	9	7	-	-
110	Pleurisy (not specified as tuberculous).....	65	40	15	6	4	6	6	-	-	-	-	-
111a	Hemorrhagic infarction and thrombosis of lungs.....	64	35	24	5	-	8	5	3	-	-	-	-
111b,c	Acute edema, chronic and unspecified congestion of lungs.....	62	34	23	2	3	15	7	7	-	-	-	-
112	Asthma.....	83	48	31	2	2	13	7	5	1	-	-	-
113	Pulmonary emphysema.....	6	4	2	-	-	3	2	-	1	-	-	-
114	Other diseases of respiratory system (except tuberculosis).....	59	37	9	12	1	31	28	2	-	1	-	-
		2,142	1,092	861	94	95	249	142	84	12	11	-	-
IX.—Diseases of the digestive system.....													
115a,b,d	Diseases of buccal cavity and adnexa.....	36	15	19	-	2	5	-	4	1	-	-	-
115c	Diseases of pharynx and tonsils.....	30	14	12	3	1	6	4	1	-	-	-	-
116	Diseases of esophagus.....	7	1	5	1	-	2	1	-	-	-	-	-
117a	Ulcer of stomach.....	171	125	29	12	5	27	21	5	-	1	-	-
117b	Ulcer of duodenum.....	76	57	17	1	1	11	11	-	-	-	-	-
118	Other diseases of stomach (except cancer).....	61	25	19	9	8	10	6	3	1	-	-	-
119	Diarrhea, enteritis, and ulceration of intestines (under 2 years).....	228	119	88	10	11	31	11	7	9	4	-	-
120	Diarrhea, enteritis, and ulceration of intestines (2 years and over).....	71	34	29	3	5	4	2	2	-	-	-	-
121	Appendicitis.....	264	130	110	10	14	35	22	12	-	1	-	-
122a	Hernia.....	167	77	74	12	4	20	12	8	-	-	-	-
122b	Intestinal obstruction.....	215	77	114	7	17	24	12	12	-	-	-	-
123	Other diseases of intestines.....	46	19	19	3	5	4	3	1	-	-	-	-
124a	Cirrhosis of liver (with mention of alcoholism).....	29	24	3	1	1	1	1	-	-	-	-	-
124b	Cirrhosis of liver (without mention of alcoholism).....	396	251	125	12	8	26	15	9	1	1	-	-
125a	Acute yellow atrophy of liver (nonpuerperal).....	21	10	8	2	1	1	1	-	-	-	-	-
125b	Other diseases of liver.....	21	8	9	3	1	1	1	-	-	-	-	-
126	Biliary calculi.....	133	39	90	1	3	19	7	11	-	1	-	-
127	Other diseases of gallbladder and biliary ducts.....	105	40	62	3	-	10	5	3	-	2	-	-
128	Diseases of pancreas (except diabetes mellitus).....	29	17	12	-	-	5	4	1	-	-	-	-
129	Peritonitis (cause not stated).....	36	10	17	1	8	7	3	4	-	-	-	-
		3,981	2,008	1,571	222	180	363	241	112	5	5	-	-
X.—Diseases of the genito-urinary system.....													
130	Acute nephritis.....	60	26	26	3	5	11	9	2	-	-	-	-
131a	Arteriosclerotic kidney.....	2,214	1,059	942	112	101	168	101	62	2	3	-	-
131b	Other chronic nephritis.....	1,135	564	458	65	48	90	61	27	1	1	-	-
132	Nephritis unspecified (10 years and over).....	69	34	23	6	6	23	13	8	2	-	-	-
133	Other diseases of kidneys and ureters, etc. *.....	107	55	40	7	5	8	6	2	-	-	-	-
134	Calculi of urinary passages.....	51	28	19	3	1	4	2	2	-	-	-	-
135	Diseases of urinary bladder.....	15	6	7	2	-	5	2	3	-	-	-	-
136	Diseases of urethra (except calculi).....	12	7	-	4	1	-	-	-	-	-	-	-
137	Diseases of prostate.....	246	226	...	20	...	47	47	...	-	...	-	-
138	Diseases of other male genital organs (except venereal).....	3	3	...	-	...	-	-	...	-	...	-	-
139a	Diseases of ovaries, fallopian tubes, and parametria.....	50	...	39	...	11	5	...	4	...	1	-	-

76	Other diseases of the blood and blood-forming organs.....	2	1	1	—	—	19	13	5	—	—
V.—Chronic poisoning and intoxication.....											
		6	6	—	—	—	262	189	41	26	6
77a,b	Alcoholic pellagra and other deficiency states associated with alcoholism.....	—	—	—	—	—	8	6	1	1	—
77c-e	Alcoholism (acute, chronic, and unspecified).....	5	5	—	—	—	235	173	32	24	6
78	Lead poisoning.....	1	1	—	—	—	4	3	1	—	—
79	Chronic poisoning by other mineral or organic substances.....	—	—	—	—	—	15	7	1	1	—
VI.—Diseases of the nervous system, etc. *											
		325	168	140	11	6	11,615	5,097	6,042	226	250
80	Encephalitis (nonepidemic).....	8	3	2	2	1	86	50	30	2	4
81	Meningitis (not due to meningococcus).....	12	8	3	1	—	215	106	70	22	17
82	Diseases of spinal cord (see exceptions) *	10	4	6	—	—	302	175	117	9	—
83a	Cerebral hemorrhage or effusion (excluding birth injuries).....	244	131	105	6	2	8,506	3,626	4,570	139	171
83b	Cerebral embolism and thrombosis.....	10	6	4	—	—	1,429	639	743	22	25
83c	Cerebral softening.....	1	—	1	—	—	68	24	41	—	—
83d	Hemiplegia and other paralysis of unspecified origin.....	19	7	11	1	—	93	45	44	3	1
84	Mental diseases and deficiency (see exception) *	2	—	2	—	—	133	46	77	3	0
85	Epilepsy.....	8	4	2	—	2	226	110	98	11	7
86	Convulsions (under 5 years).....	1	—	1	—	—	13	9	4	—	—
87	Other diseases of nervous system.....	5	2	2	—	1	410	202	192	11	5
88	Diseases of organs of vision.....	—	—	—	—	—	3	1	2	—	—
89a	Otitis and other diseases of the ear.....	4	2	1	1	—	82	41	34	2	5
89b	Diseases of mastoid process.....	1	1	—	—	—	49	23	20	2	4
VII.—Diseases of the circulatory system.....											
		812	520	269	11	12	61,091	33,077	25,805	1,072	1,137
90-95	Diseases of the heart (all forms).....	769	491	256	10	12	57,328	31,251	24,009	1,003	1,065
90	Pericarditis (except acute rheumatic).....	1	1	—	—	—	24	11	12	—	—
91a,b	Bacterial and other acute or subacute endocarditis.....	5	2	3	—	—	133	67	53	9	4
91c	Endocarditis (unspecified, under 45 years).....	2	1	1	—	—	8	3	4	—	—
92a-d	Chronic endocarditis and diseases of the valves.....	128	70	50	3	5	3,924	1,862	1,919	75	70
92e	Endocarditis (unspecified, 45 years and over).....	9	7	1	—	1	142	80	58	1	3
93a	Acute myocarditis (except rheumatic).....	13	11	2	—	—	276	137	133	1	7
93b	Myocarditis (unspecified, under 45 years).....	—	—	—	—	—	14	6	7	1	—
93c-d	Chronic myocarditis and myocardial degeneration.....	256	156	93	6	1	34,683	17,073	15,967	653	790
93e	Other myocarditis (unspecified).....	46	29	17	—	—	895	470	408	12	—
94a	Diseases of coronary arteries.....	183	132	50	—	1	14,578	10,048	4,237	178	115
94b	Angina pectoris.....	26	21	4	—	—	217	142	72	3	—
95a	Functional diseases of heart, etc. *	3	2	1	—	—	32	16	15	—	—
95b,c	Other and unspecified diseases of heart.....	97	59	34	1	1	2,398	1,136	1,124	70	68
96	Aneurysm (except of heart and aorta).....	3	2	1	—	—	256	153	71	6	—
97	Arteriosclerosis (except coronary or renal sclerosis).....	28	19	8	1	—	3,104	1,495	1,504	53	52
98	Gangrene.....	1	—	1	—	—	39	9	9	—	—
99	Other diseases of arteries.....	4	4	—	—	—	155	90	96	3	6
100	Diseases of veins.....	5	3	2	—	—	122	49	71	1	1
101	Diseases of lymphatic system.....	—	—	—	—	—	4	1	1	2	—
102	High blood pressure (idiopathic).....	2	1	1	—	—	78	25	43	3	7
103	Other diseases of circulatory system.....	—	—	—	—	—	5	4	1	—	—
VIII.—Diseases of the respiratory system.....											
		422	207	165	30	20	7,225	3,981	2,674	345	225
104a	Diseases of nasal fossae.....	4	3	1	—	—	7	3	1	2	1
104b	Diseases of accessory sinuses.....	—	—	—	—	—	42	28	12	2	—
105	Diseases of larynx.....	3	2	—	—	1	32	19	9	3	—
106a	Acute bronchitis.....	3	2	1	—	—	111	63	44	3	—

TABLE 24.—DEATHS FROM EACH CAUSE, BY RACE AND SEX:  
(By place of residence. Exclusive of stillbirths)

Int. List No.	CAUSE OF DEATH	NEW MEXICO						NEW YORK					
		Total deaths	White		Nonwhite		Total deaths	White		Nonwhite			
			M	F	M	F		M	F	M	F		
VIII.—Diseases of the respiratory system—Continued													
106b	Chronic bronchitis.....	5	4	1	-	-	175	119	48	6	2		
106c	Bronchitis (unspecified).....	5	2	3	-	-	61	31	30	-	-		
107	Bronchopneumonia (including capillary bronchitis).....	167	80	62	16	9	2,876	1,455	1,192	127	102		
108	Lobar pneumonia.....	145	72	57	8	2	3,046	1,728	1,055	171	92		
109	Pneumonia (unspecified).....	55	23	25	5	2	132	90	41	-	1		
	A. Atypical or virus pneumonia.....	4	2	2	-	-	57	36	20	-	1		
	B. Pneumonia (all other, unspecified).....	51	21	23	5	2	75	54	21	-	-		
110	Pleurisy (not specified as tuberculous).....	6	4	2	-	-	195	122	58	10	5		
111a	Hemorrhagic infarction and thrombosis of lungs.....	5	2	2	1	-	91	37	47	3	4		
111b,c	Acute edema, chronic and unspecified congestion of lungs.....	6	3	3	-	-	91	44	42	-	5		
112	Asthma.....	12	5	7	-	-	176	104	60	4	8		
113	Pulmonary emphysema.....	-	-	-	-	-	30	25	5	-	-		
114	Other diseases of respiratory system (except tuberculosis).....	6	5	1	-	-	160	113	30	14	3		
IX.—Diseases of the digestive system.....													
		517	254	185	40	38	6,996	3,916	2,749	202	129		
115a,b,c	Diseases of buccal cavity and adnexa.....	10	3	4	1	2	81	38	39	3	1		
115c	Diseases of pharynx and tonsils.....	6	4	1	-	1	69	32	28	4	5		
116	Diseases of esophagus.....	1	1	-	-	-	15	11	4	-	-		
117a	Ulcer of stomach.....	24	21	3	-	-	756	604	116	31	5		
117b	Ulcer of duodenum.....	7	7	-	-	-	390	320	55	13	2		
118	Other diseases of stomach (except cancer).....	19	8	9	1	1	54	32	19	1	2		
119	Diarrhea, enteritis, and ulceration of intestines (under 2 years).....	281	129	89	35	28	471	254	163	33	21		
120	Diarrhea, enteritis, and ulceration of intestines (2 years and over).....	13	4	8	-	1	197	85	103	5	4		
121	Appendicitis.....	39	19	18	2	-	731	383	306	24	18		
122a	Hernia.....	17	10	6	-	1	660	369	267	17	7		
122b	Intestinal obstruction.....	30	10	18	1	1	616	281	290	19	26		
123	Other diseases of intestines.....	2	1	1	-	-	179	106	69	2	2		
124a	Cirrhosis of liver (with mention of alcoholism).....	2	1	1	-	-	292	198	81	10	3		
124b	Cirrhosis of liver (without mention of alcoholism).....	30	18	12	-	-	1,341	776	523	25	17		
125a	Acute yellow atrophy of liver (nonpuerperal).....	2	1	1	-	-	70	33	30	2	5		
125b	Other diseases of liver.....	3	2	1	-	-	79	42	31	4	2		
126	Biliary calculi.....	13	6	5	-	2	551	168	376	3	4		
127	Other diseases of gallbladder and biliary ducts.....	11	6	5	-	-	253	91	159	1	2		
128	Diseases of pancreas (except diabetes mellitus).....	2	-	1	-	1	122	61	57	2	2		
129	Peritonitis (cause not stated).....	5	3	2	-	-	69	32	33	3	1		
X.—Diseases of the genito-urinary system.....													
		298	150	135	7	6	8,666	4,565	3,648	206	247		
130	Acute nephritis.....	17	5	11	-	1	100	47	45	6	2		
131a	Arteriosclerotic kidney.....	112	50	58	2	2	5,121	2,425	2,442	116	138		
131b	Other chronic nephritis.....	98	50	42	4	2	1,734	846	793	32	63		
132	Nephritis unspecified (10 years and over).....	19	11	7	-	1	134	71	51	5	7		
133	Other diseases of kidneys and ureters, etc. *.....	15	7	8	-	-	282	152	113	9	8		
134	Calculi of urinary passages.....	3	2	1	-	-	227	138	82	4	3		
135	Diseases of urinary bladder.....	5	5	-	-	-	45	16	27	1	1		
136	Diseases of urethra (except calculus).....	-	-	-	-	-	26	21	1	4	-		
137	Diseases of prostate.....	21	20	...	1	...	873	844	...	29	...		
138	Diseases of other male genital organs (except venereal).....	-	-	...	-	...	5	5	...	-	...		
139a	Diseases of ovaries, fallopian tubes, and parametria.....	4	...	4	...	-	74	...	53	...	21		
139b	Diseases of uterus.....	4	...	4	...	-	43	...	39	...	4		
139c	Diseases of other and unspecified female genital organs.....	-	...	-	...	-	2	...	2	...	-		
XI.—Diseases of pregnancy, childbirth, and the puerperium.....													
		62	...	54	...	8	425	...	382	...	43		
140	Abortion with mention of infection.....	3	...	3	...	-	48	...	36	...	12		
140a,b	Abortion (septic), spontaneous or therapeutic*.....	3	...	3	...	-	41	...	31	...	10		
140c,d	Abortion (septic), self-induced or nontherapeutic*.....	-	...	-	...	-	7	...	5	...	2		
141	Abortion without mention of infection.....	2	...	3	...	1	18	...	18	...	-		
141a,c	Abortion (nonseptic), spontaneous, therapeutic, with toxemia*.....	1	...	-	...	1	4	...	4	...	-		
141b	Abortion (nonseptic), spontaneous, therapeutic, without toxemia.....	-	...	-	...	-	7	...	7	...	-		
141d	Abortion (nonseptic), spontaneous, therapeutic, unspecified*.....	1	...	1	...	-	5	...	5	...	-		
141e,f	Abortion (nonseptic), self-induced or nontherapeutic*.....	-	...	-	...	-	2	...	2	...	-		
142a	Ectopic gestation, with mention of infection.....	-	...	-	...	-	4	...	3	...	1		
142b	Ectopic gestation, without mention of infection.....	3	...	1	...	2	29	...	22	...	7		
143a	Placenta praevia (death before delivery).....	-	...	-	...	-	1	...	-	...	1		
143b,c	Other hemorrhages of pregnancy (death before delivery).....	-	...	-	...	-	4	...	3	...	1		
144a,b	Eclampsia and nephritis of pregnancy (death before delivery)*.....	3	...	3	...	-	17	...	16	...	1		
144c,d	Other toxemias of pregnancy (death before delivery)*.....	-	...	-	...	-	5	...	5	...	-		
145	Other diseases and accidents of pregnancy (death before delivery).....	1	...	1	...	-	18	...	15	...	3		
	A. With mention of infection.....	-	...	-	...	-	11	...	9	...	2		
	B. Without mention of infection.....	1	...	1	...	-	7	...	6	...	1		
146a	Placenta praevia (with childbirth).....	1	...	1	...	-	12	...	12	...	-		
146b,c	Other hemorrhages of childbirth and puerperium.....	16	...	13	...	3	50	...	45	...	5		
147a,b	Puerperal pyelitis, other general or local puerperal infection*.....	12	...	10	...	2	47	...	43	...	4		
147c,d	Puerperal thrombophlebitis and embolism, and sudden death.....	5	...	5	...	-	58	...	58	...	-		
148a,b	Puerperal eclampsia and nephritis*.....	9	...	9	...	-	36	...	35	...	1		
148c,d	Other puerperal toxemias.....	2	...	2	...	-	15	...	14	...	1		
149	Other accidents and specified conditions of childbirth.....	-	...	-	...	-	44	...	38	...	6		
150	Other and unspecified conditions of childbirth and puerperium.....	5	...	5	...	-	19	...	19	...	-		
XII.—Diseases of the skin and cellular tissue.....													
		2	-	2	-	-	98	37	42	3	4		
151	Carbuncle and furuncle.....	1	-	1	-	-	11	5	5	1	-		
152	Phlegmon and acute abscess.....	1	-	1	-	-	21	13	8	-	-		
153	Other diseases of skin and cellular tissue.....	-	-	-	-	-	56	21	29	2	-

Note.—Certain cities listed in this table are located in more than one county. In these cases, figures for the county include only the figures for that part of the city in the county. Total figures for each of these cities are shown under the county containing the larger proportion of the city's population. Totals for Amarillo, Tex., are shown under Potter County; Atlanta, Ga., under Fulton County; Bethlehem, Pa., under Northampton County; Centralia, Ill., under Marion County; Elgin, Ill., under Kane County; Ellwood City, Pa., under Lawrence County; Fostoria, Ohio, under Seneca County; Huntington, W. Va., under Cabell County; Joplin, Mo., under Jasper County; Rocky Mount, N. C., under Nash County; St. Cloud, Minn., under Stearns County; Watertown, Wis., under Jefferson County; and Youngstown, Ohio, under Mahoning County. Likewise, total figures for Yellowstone National Park are shown under Wyoming.

## GENERAL TABLES—INFANT DEATHS

577
